Brucker is excited to announce that Greenheck has expanded their **RV (Rooftop Ventilator)** product line with the release of model **RV-10**. Model RV-10 is available for selection in CAPS version 4.35 and offers a lower CFM range in a smaller footprint.

The RV-10 has an airflow capacity from **500 – 2,500 CFM** and is available with the following features:

- 3 – 7 tons of packaged DX (Direct Expansion) cooling
- 75 – 200 MBH of indirect gas heating
- 5 – 60 kW electric heat
- Inverter compressor
- Vertical or horizontal duct connections

Greenheck's extensive RV/E product line ranges from **200 – 18,000 CFM** and **3 – 70 tons** of packaged cooling designed to meet space load and ventilation requirements in both DOAS (Dedicated Outdoor Air System) and partial recirculation applications. These pre-engineered rooftop ventilators have the following features:

- Optional Energy Recovery (RVE)
- Inverter or digital scroll compressors
- Modulating hot gas reheat
- High turndown furnace capability (up to 16:1)
- Low sound condenser fans with modulating head pressure capability
- Vertical or horizontal duct connections

For more information on Greenheck model RV/E, please contact your sales representative or local sales office.
