CAP – Ceiling Air Purifier

Price Industries introduces the ceiling air purifier (CAP) which is ideal for indoor spaces like offices, classrooms, or hotels that require additional filtration. The CAP is easily installed in a 2'x2' ceiling grid, making it easy to incorporate into existing applications.

The CAP can quietly operate at 3-different fan speeds (85, 120, & 150 cfm) controlled by an external dial. The CAP's internal fan draws air through one side of the grille which passes through an easily removeable & replaceable HEPA filter. The air is then sent back to the space through the other side of the grille.

Optional Accessories:

- UV-C light
- Bipolar ionization (BPI)
- MERV 13 filter
- Different diffuser styles

Want to learn more about the new CAP? Contact your local Brucker salesperson for more information.
